

Proactive tine assembly—point options

Applicable to : Unipress & Cultipress

As you are aware these machines are fitted with the option of Proactive leading tines with a range of points of varying widths to suit different soil conditions. The purpose of this bulletin is to ensure you are aware of the relevant options

Proactive - straight tine standard 35mm reversible chisel point

Suitable for:-

Deeper cultivation in dry conditions due to
tine spacing of 300mm tine centres

Tine Part no.P12628

Point Part no.P03017

Proactive - Cranked tine sweep point (100mm , 225mm)

100mm suitable for :-

Deeper cultivation, increased soil 'lift' and
aeration

225mm suitable for :-

shallow cultivations for complete soil
movement,high lift compensated by shal-
low setting.Wider sweep does compensate
for the need for large quantities of narrow
spaced shallow tines as per traditional
seedbed cultivators

P13135
100mm Point

P12713
225mm Point

In summary sweep points give reduced wet soil or clod lift, advantage of full width soil movement and gives good tilth for boards to level and carry soil.
